

SPIDA[®]silk: CALCULATE SAG AND TENSION

With SPIDAsilk, sag and tension calculations are quick, easy, and precise.

Set all the limiting sag conditions you need

- Apply multiple constraints, based on sag and tension limits
- Set percent of rated tensile strength at initial, final tension without creep, or final tension with creep

Identify sag measurements anywhere along the span

- Model evaluation changes with ease and find sag measurements along the span for unusual crossings or long spans
